Mentora AI Lean Canvas

IBM SkillsBuild internship project | SDG 4 Quality Education

1 Problem

- Learning resources are scattered
- Static courses do not adapt to goals or performance
- Students lack consistent mentoring and accountability
- AI content becomes outdated quickly

4 Solution

- Personalized roadmaps
- Grounded AI tutor
- Adaptive assessments
- Career and project guidance
- Progress, streaks, and reminders

3 Unique value

- One learner record connects assessment, teaching, practice, career preparation, and progress
- Specialist agents respond using persistent learner context
- Offline demo remains usable without external keys

9 Unfair advantage

- Working end-to-end MVP
- Transparent agent routing and grounded sources
- Career-aware personalization
- SDG 4 alignment for institutional pilots

2 Customer segments

- College and engineering students
- Non-technical AI learners
- Universities and AI clubs
- CSR and government skill programs

5 Channels

- College and university pilots
- IBM SkillsBuild communities
- Student ambassadors
- Web application
- Future LMS, mobile, email, and WhatsApp

8 Key metrics

- Roadmap completion
- Quiz improvement by topic
- Active learning days and streaks
- Project progress
- Learner satisfaction and retention

7 Cost structure

- Model and embedding usage
- Database and hosting
- Knowledge validation
- Product development
- Support and institutional adoption

6 Revenue streams

- Freemium learner plan
- Premium mentor features
- College licenses
- CSR and government programs
- Future certification and marketplace fees

Current MVP: web app, deterministic personalization, local ChromaDB retrieval, in-app reminders, curated research updates

Future scope is labeled explicitly
